DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/19/2007 has been entered.

Claim Rejections - 35 USC § 112

Claims 29 and 35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 29, "the connecting branches" and "the control means" lack proper antecedent basis because their presence is not positively provided in previous portions of the claim body (the claim merely requires the possible connection of branches to such parts based on the language of the claim, not actual connection thereto). Clarification is required.

With respect to claim 35, "the means for controlling the supply of each fluid" lacks proper antecedent basis.

Response to Arguments

Applicant's arguments, filed 4/19/2007, with respect to the lack of first and second sub-branches having containers and tubes as set forth in newly presented

Art Unit: 1744

independent claim 29, have been fully considered and are persuasive. The prior art rejections have been withdrawn.

Allowable Subject Matter

Claim 29 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 30-36 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the closest prior art of record, namely Castellini EP 734,692, fails to clearly teach or suggest the separate containers, their respective closures and tubes connected as set forth in newly presented independent claim 29 and as depicted in Fig. 2.
